

TORCH HARLEY 2" LED TURN SIGNAL INSERT

Thank you for choosing CyronMotor products. At CyronMotor we are committed to providing performance and safety without any compromises. Please read all the instructions and follow carefully. Assistance is available at any of our dealer networks or directly at techsupport@cyron.com.

SURFACE OF THE LEDS MUST REMAIN CLEAN DURING INSTALLATION. BUILD UP OF GREASE, OIL AND OTHER PETROLEUM PRODUCT WILL DIMINISH THEIR LIFE. IN CASE OF CONTACT WITH SUCH PRODUCT, IT IS SAFE TO GENTLY WIPE THE LED SURFACE CLEAN WITH A 50% DILUTED ISOPROPYL ALCOHOL. LET IT DRY BEFORE INSTALLATION.

White halo and amber center switchback lights are designed for front turn signals and best used with a smoke/clear lens.

Compatibility: Due to the minimal electrical load of this product in comparison to the halogen lights, older bikes will experience a fast flash (Hyper-flash) if all turn signal lights get converted to LEDs. This can be remedied by adding load equalizers. CyronMotor does not suggest "Resistive" load equalizers due to excessive heat and possible safety issues. See your local dealer or CyronMotor.com for electronic load equalizers. Following list of Harley motorcycles fully compatible with AC11 lights and do not need additional load equalizers. After installing the new lights on these models, turn on 4-way hazards for 60 seconds. The CANBUS system will reprogram itself with the new lights.

Dynas 2012+ , Softails 2011+ , All other models 2014+

INSTRUCTIONS

Steps below should be performed with the bike/vehicle in the off position.

1. Remove the lens as suggested by the factory.
2. Take out the existing bulb. Halogen bulbs will be hot if they have been on.

Pay close attention to orientation of the bulb retaining pins. It will make installation even easier if you remember which orientation the pins are. In case of 1157 lights there is a shorter and longer spacing of the pins. Note their placement.

3. Insert TORCH into the socket. Make sure the pins and the socket notches are correctly aligned. Press and turn clockwise to lock in. NEVER APPLY TOO MUCH FORCE.

IMPORTANT: If the bulb cannot turn, the pin placement may be incorrect. If in doubt, re-install the stock bulb to verify pin positions.
Dielectric grease: It is not required, but a very light coating on the base of the plug and the two retaining pins is acceptable.

4. Check the operation of lights. See Compatibility section above in case of any fast flash issues.
